

Rushab Tours: website, CMS and CRM

A package first website, a dashboard your team edits without a developer, and every enquiry captured in one place. Everything you can click in the prototype is included below.

Solviqo

Prepared 7 October 2026

Valid for 30 days

Prototype: solviqodigital.com/rushab

The website WHAT A TRAVELLER SEES

- **Home** with package search by destination, month, nights and budget
- **Package listing** filtered by destination, length, budget, theme and departure city, sorted by price or duration
- **Destination pages**, one per destination, each with its own packages and photos
- **Package page**: gallery, named hotels with room type and meal plan, day wise itinerary with dates **and photos per day**, sightseeing, inclusions, exclusions, special notes, cancellation and payment policy
- **Booking box** with travel date, **rooms as well as adults and children**, and a live per person and total price
- **Share this package** button: WhatsApp, copy link and email
- **Download the package** as a PDF, in exchange for a name, number and email, which becomes a lead
- **Guest photo gallery and an Instagram feed** section, pulling your real traveller photos
- **Testimonials**, approved by you before they appear
- **Social links** in the header and footer
- **Flights, hotels, bus and travel insurance** each get their own page, which hands the traveller over to your booking partner
- **About us, contact us** with an enquiry form and map, **group tours, visa, FAQ, terms and privacy**, every one of them editable by your team
- Mobile first, fast on 4G, built for Google with clean URLs and redirects from your current site

WhatsApp WHERE MOST ENQUIRIES WILL COME FROM

- Floating button on every page, labelled **Chat With Expert**
- Short scripted chat first: destination, month, travellers, budget
- Hands over to real WhatsApp with those answers already written in
- **Every new lead is pushed to your team on WhatsApp** the moment it arrives, with the package and the number

Delivery 20 DAYS

- **Day 1 to 3** Design sign off, database and project setup
- **Day 4 to 7** The engine behind it, logins and the different access rights
- **Day 8 to 12** The dashboard, so your team can start loading packages
- **Day 13 to 17** The website, enquiry flow, WhatsApp and lead capture
- **Day 18 to 20** Your packages moved across, training, testing, Google redirects, live

EVERY PAGE WE BUILD

Home · Package listing · Destination pages · Package detail · Compare · Guest gallery and Instagram · Flights · Hotels · Bus · Travel insurance · Group tours · Visa · About us · Contact us · FAQ · Terms · Privacy · Plus the full dashboard at dashboard.rushabtours.com

TIMELINE

20 days to live

The dashboard DASHBOARD.RUSHABTOURS.COM

- **Package editor** in eight tabs: overview, hotels, itinerary, sightseeing, inclusions, pricing, gallery and the Google listing. No code, no developer
- Drag to reorder days and lines, duplicate last year's package to build this year's
- **Seasonal pricing** by date range, with child rates
- **Media library** with upload, crop and reuse across packages
- Destinations, testimonials and the guest gallery, all managed here
- Draft, preview and publish, so nothing goes live by accident
- **Admin and employee accounts with different rights**: owner sees everything, manager edits packages and works leads, sales sees only leads, content sees only packages and photos

Leads and CRM EVERY ENQUIRY, NOTHING LOST

- Captured: name, mobile, WhatsApp, email, package, travel date, rooms, adults, children and ages, budget and their note
- **Captured silently: whether the lead came from Google Ads, organic search, Instagram, a referral or the WhatsApp button**, down to the campaign or search term
- City, device, time on site, pages viewed and the package they looked at first
- Pipeline: new, contacted, quoted, won, lost, with owner, follow up reminder and full history
- **Lead popup** on package pages, sliding in from the right, once per visit
- One tap to call, or to open WhatsApp with their name and package filled in
- Reporting by month, package and source, so you know which ad actually paid
- Export to Excel any time

Not included SO THERE ARE NO SURPRISES

- Flight and hotel booking inventory. These link out to your partner
- Online payment and instant booking. Can be added later as a separate piece
- Photography, videography and writing new package copy. We move and tidy what you have
- Running your ad campaigns, although the tracking for them is built in
- Third party fees: domain, hosting, and the official WhatsApp Business API if you want it later

₹49,000

Everything above, built, migrated and live

50%

On kick off

25%

When the dashboard works

25%

On launch

1 year

Maintenance included, not billed

The year of maintenance covers: hosting support, backups and monitoring, security updates, bug fixes, and small content or design changes, with a person who answers. **What we need from you:** one decision maker who can sign off, your current package content and photos, the list of your old page URLs, and access to the domain, Google Analytics and Google Ads.
